DOCUMENT-IDENTIFIER: US 5491152 A

TITLE: Derivatives of cyclic ethers and sulfides for the treatment of atherosclerosis

Detailed Description Text (396):

By "therapeutically effective amount" it is meant an amount of a compound of Formula I that when administered alone or in combination with an additional therapeutic agent to a cell or mammal is effective to inhibit ACAT so as to prevent or ameliorate the atherosclerosis or hypercholesterolemia disease condition or the progression of the disease.

Detailed Description Text (612):

The compounds of the present invention can also be administered in the form of liposome delivery systems, such as small unilamellar vesicles, large unilamellar vesicles, and multilamellar vesicles. Liposomes can be formed from a variety of phospholipids, such as cholesterol, stearylamine, or phosphatidylcholines.

TITLE: Methods and compositions for gene therapy for the treatment of defects in lipoprotein metabolism

Detailed Description Text (44):

The AAV rep gene can be supplied to the hybrid virus by several methods described in the above-incorporated application. One embodiment for providing rep proteins in trans is by transfecting into the target monolayer of cells previously infected with the hybrid vector, a liposome enveloped plasmid containing the genes encoding the AAV rep 78 kDa and 52 kDa proteins under the control of the AAV P5 promoter. More preferably for in vivo use, the AAV rep gene may also be delivered as part of the hybrid virus. One embodiment of this single particle concept is supplied by a polycation conjugate of hybrid virus. Infection of this modified virus conjugate is accomplished in the same manner and with regard to the same target cells as identified above. However, the polylysine conjugate of the hybrid virus onto which was directly complexed a plasmid that encoded the rep 78 and 52 proteins, combines all of the functional components into a single particle structure. Thus, the hybrid virus conjugate permits delivery of a single particle to the cell, which is considerably more desirable for therapeutic use. In another embodiment, the hybrid virus is modified by cloning the rep cDNA directly into the adenovirus genome portion of the hybrid vector.
